INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety.
- 12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.
- 12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

RED COACH 74

EXHIBIT A

Origin and Breeding History of the Variety

1. RED COACH 74 originated from a hand pollinated cross between Climax and Vanguard. The cross was made in the Salinas Valley of California in 1969.
2. Initial trial plantings were conducted in 1970 to allow for individual plant selections. Several trial plantings followed the initial selection work to allow for segregation and more comprehensive evaluations and selections. Selections made were based upon size, color, texture, and resistance to rusty rib. The procedures involving trial plantings, evaluations, and plant selections were repeated numerous times before finally attaining the desirable type. These plantings were conducted in Yuma, Arizona, the Salinas and Imperial Valleys of California.
3. RED COACH 74 is resistant to rusty rib and genetically uniform and free of any distinct variations.

EXHIBIT B

Botanical Description of the Variety:

Annual. A crisphead variety with medium sized frame. Wrapper leaves heavily savoyed with dull "Vanguard" shade of green color. Wrapper leaves are broad and thick providing similar head protection as "Vanguard".

Head is spherical. Butt of plant is medium smooth with good color (similar to Vanguard). Petioles medium smooth. For mid-winter harvest in the Imperial Valley this variety will usually produce a larger head than Vanguard.

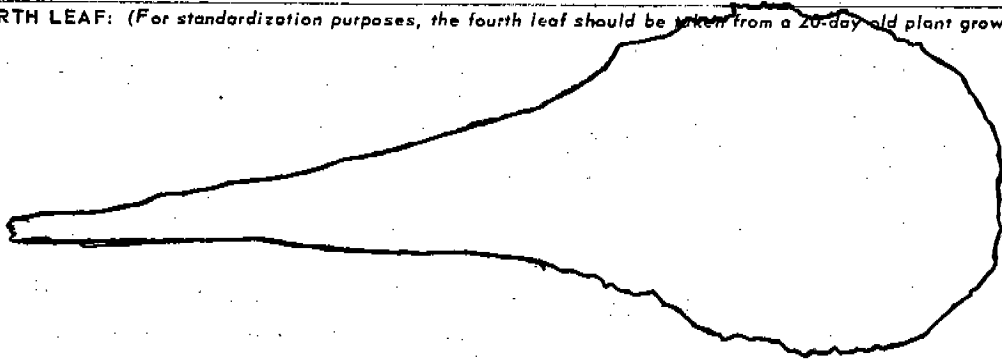

Seedstalk very uniform in height. Produces a very broad panicle and is a heavy seed yielder. Seed color is black.

VARIETY: Red Coach 74

EXHIBIT D: Data Indicative of Novelty

RED COACH 74 was developed to replace the variety Climax for winter harvest in the Southwestern United States.

Its distinguishing features include:

1. It most closely resembles the variety Vanguard but differs by having a darker green color and producing a larger head for market in the mid-winter period.
2. It matures from 3-5 days earlier than Vanguard.
3. Unique in that it is Rusty Rib resistant and is adapted for mid-winter harvest in the Southwest. Vanguard is not adapted for mid-winter harvest.
